

NATURAL STRUCTURES

Some of the most complex structures on our planet are naturally occurring and can be found all around us. Some examples of the complex natural structures all around us are found below:

Did you Know?

Engineers look to nature all the time to help inspire them with efficient and intelligent design. The study of _____, and their skulls have helped inform design decisions about helmets, and safety devices. The Japanese have used _____ birds to help design the most aerodynamic bullet train, called the Shinkansen.
